Water  
Natural resources

Sustainable Practices

GOAL

# Framework

BSA Tools

Objective

Life Cycle

- Decisions support;
- Promote building sustainability solutions.

- Reduce the use of natural resources;
- Reduce the use of non renewable energy.

- Increase the users satisfaction;
- Improve indoor environmental quality;
- Reduce operation costs.

- Support decisions and maintenance;
- Promote an high level of efficiency.

- Increase space adaptability and flexibility.

Final considerations

## Because

- These methods **promote relationships** between the built environment and the objectives of sustainable development;
- They **convert the principles** of sustainable development **into objective goals**;
- They establish **reference practices** at the global, regional and national levels;
- They are useful for **decision-making processes**.

Why?

**SB vs GB**

HBSAtool

# Sustainable vs Green Building

**SUSTAINABLE BUILDING**

**GREEN BUILDING**

- Energy
- Water, fuel, materials consumption
- Atmospheric emissions
- Site ecology and biodiversity
- Waste
- Maintenance and management
- Indoor conditions quality
- Comfort and efficiency
- Longevity, flexibility, adaptability and accessibility
- Service ability and transports
- Urban and planning issues
- Life cycle costs and impacts
- Stockholders involvement

**HBSAtool**

## Platforms

Objectives

Features

Usability

# Mobile Application

---

Platforms

**Objectives**

Features

Usability

- To **spread** this Assessment system around the world;
- To **help**, in an easier and faster way, all stakeholders, in design, construction and use phases, to know if their options are the best ones;
- To **reach** more places in the world and understand different needs, which will promote method improvement;
- In order to make available this theme to different stakeholders, and **provide access** to a specialised consultancy.

# Mobile Application

---

Platforms

Objectives

Features

Usability

- Allows the user to make a sustainability assessment of a healthcare building **anytime** and **anywhere**;
- Allows a holistic assessment of all the main **sustainability concept** pillars (environment, society, economy);
- Enables the **registration of multiple buildings** and make multiple assessments for each one of them:
- Shows **results graphically** which is intuitively;
- Facilitates contact with a **qualified expert** advisor who can provide support for each specific project.

# Mobile Application

---

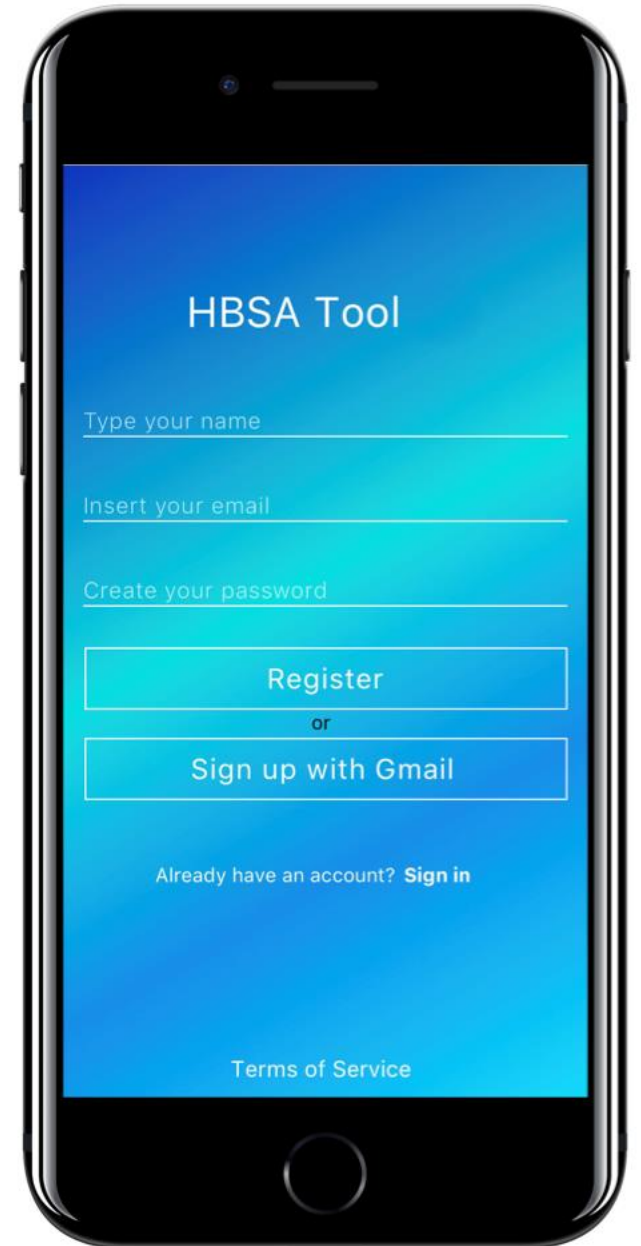

Platforms

Objectives

Features

Usability

**Register to have  
your personal  
account, with all  
your projects and  
assessments.**

# Mobile Application

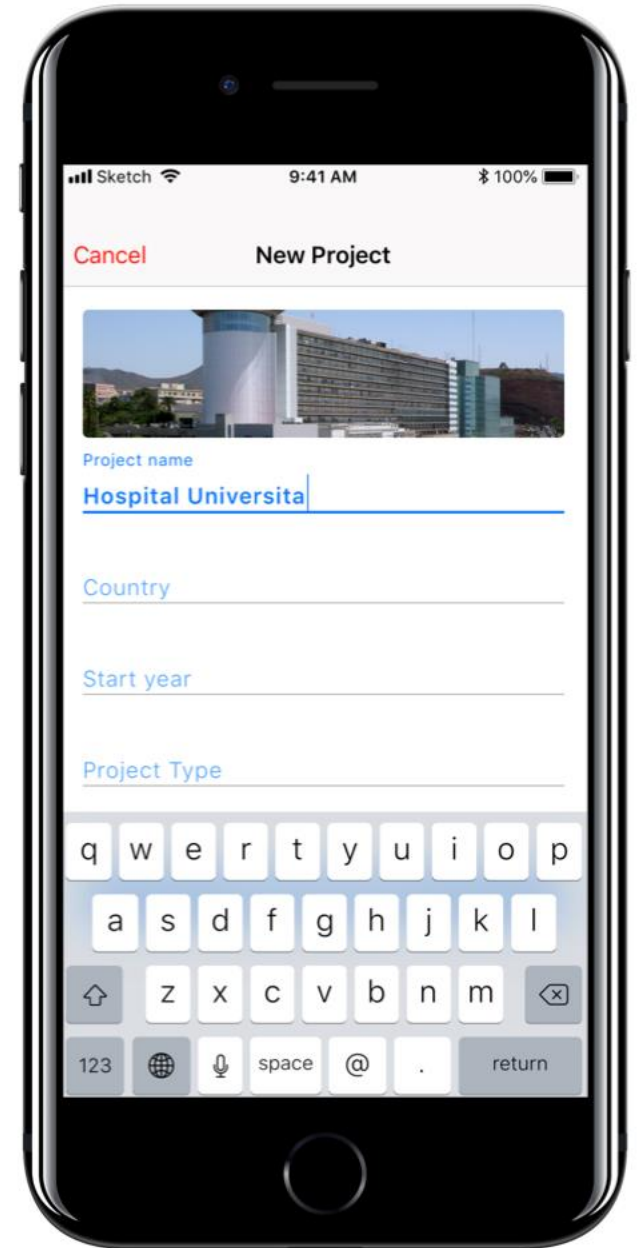

Platforms

Objectives

Features

Usability

Create a New project and start your first assessment.

# Mobile Application

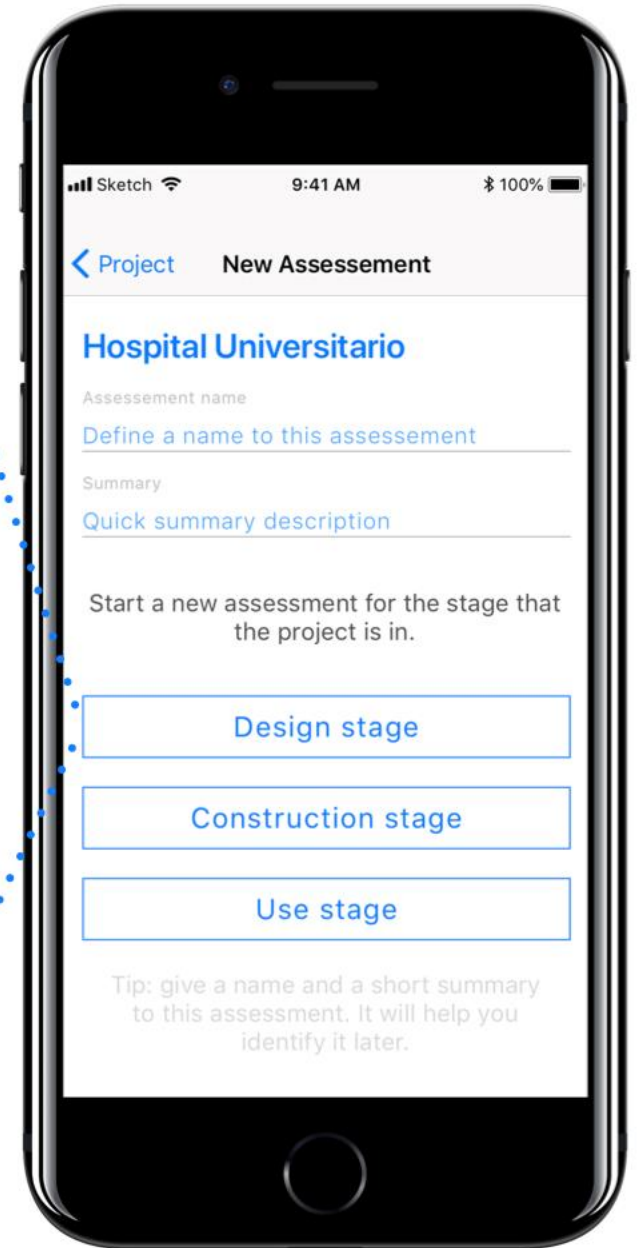

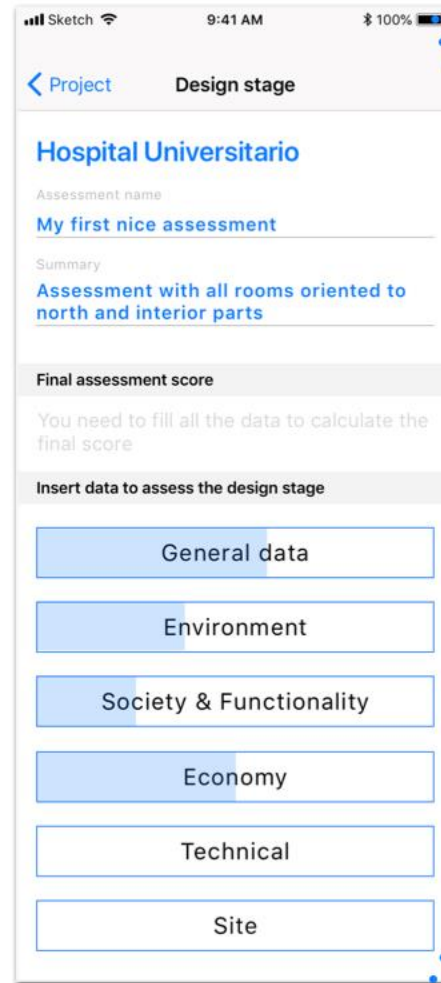

Platforms

Objectives

Features

Usability

- Create as many assessments as you want;
- Insert data as you wish;
- Get results.
